

Pharmaceutical Packaging and Labeling

From Bulk To Bottle. Modern pharmaceutical packaging equipment enables a full range of DSCSA-compliant solutions for filling, blister packing, labeling and packaging pills and capsules.

3PL Pharmaceutical Packaging and Labeling

A full complement of on-site 3PL pharmaceutical packaging and labeling solutions present a range of options to increase the efficiency, control costs and enhance profitability.

Modern packaging lines are operated by experience technicians responsible for filling, bottling, blister packing and labeling tablets and capsules. Strict cGMP guidelines are followed to ensure product safety. Re-packaging and re-labeling programs allow our clients to anticipate changing demand for packaging configurations.

PACKAGING AND 3PL COMBINED

The 3PL pharmaceutical packaging and labeling operations at WDSrx increase convenience and maximize cost control:

- Transportation fees are eliminated from shipping product from outside packagers to the WDSrx Distribution Center.
- Communication is more effective as the client interacts with specialists from one team for their packaging needs and for their product fulfillment.
- Bulk shipments of capsules and tablets can be less expensive to transport than fully packaged products. Once inside a WDSrx facility, filling, bottling and labeling of bulk supplies are completed and dispatched to our warehouse for storage and distribution.

- The timeline from packaging to fulfillment is reduced when utilizing WDSrx packaging with 3PL services compared with time-consuming shipping and coordination between separate parties.

CUSTOMIZED ON-SITE PACKAGING SOLUTIONS

Each packaging program is customized in advance to confirm all specifications and to review potential operational and cost efficiencies that are passed on to the client. Program elements include incoming, in-process and finished goods testing, batch record review, Validation Procedures and scaling production for small runs and stability batches.

The experienced WDSrx production team also tailors kitting programs from the packaging department that gather separate components and package them together before distribution to their final destination. Each kitting project requires extensive planning and precise implementation to meet the standards of clients and our internal quality control requirements.

COMPLIANCE ASSURED

Serialization describes the unique identification of individual cartons and bottles of medications. Specific standards are set out in the Federal Drug Supply Chain Security Act (DSCSA) that promises increased consumer safety, protection from fraud and a reduction in counterfeit drug products. The new label protocols require technology upgrades to equipment. WDSrx pharmaceutical packaging lines are fully compliant with the DSCSA enacted regulations.
